Suction Nozzles in Silicone for Food Industry

The nozzles fulfill the demands and recommendations for the food industry according to FDA 177.2600 and the german BfR"XV" (Bundesinstitut für Risikobewertung). The recommendations of the BfR for material that is used for contact with food are not statutory norms. However, they do represent valid standards concerning conditions for consumer products made of "High Polymers" as silicon, paper and rubber in accordance with **§31, para 1, German Food and Feed Code** and **Art. 3, para 1 a within EC 1935/2004**.

"High Polymers" are used for cleaning of processing machines and are well established products within the food and pharmaceutical industry.
