## Suction Casings

Dustcontrol customise suction casings to suit your production process.

A Healthy Business.

# Long Experience of Extraction Systems

Dustcontrol was founded in 1972, with the idea of manufacturing extraction systems to capture dust and other pollutants at the source. We work closely with our customers, which means that we are always up to date regarding the requirements, regulations and working conditions in different types of workplace. We supply products that meet these ever-changing needs.

Dustcontrol manufactures mobile dust extractors for industrial and construction use, fixed extraction systems, peripheral equipment and accessories.

We help companies all over the world to achieve a cleaner working environment. Our development department and production facilities are located in Sweden.

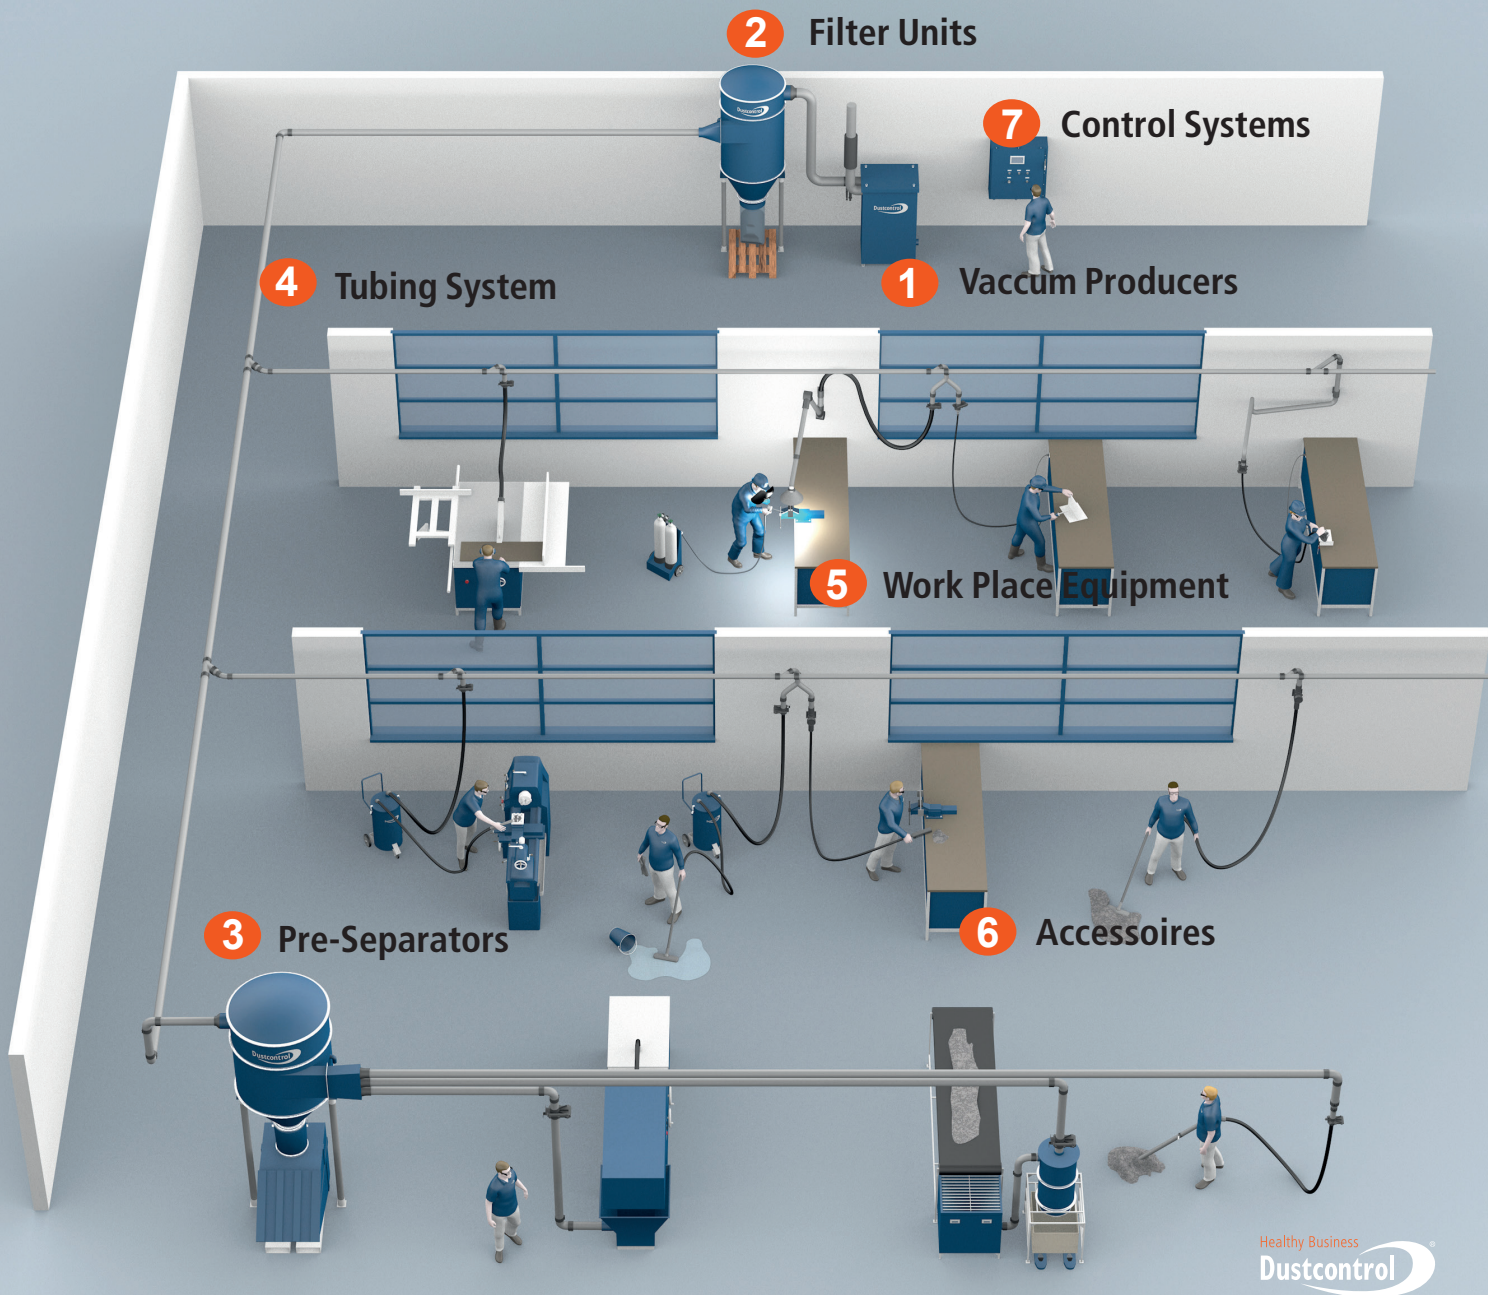

But it is not only products that we provide. We also provide the answers to questions such as: How can you capture and extract different kinds of particles and pollutants in the best possible way for your business? How do you deal with waste that can be recycled or reused? We offer a complete service package, including accessories and spare parts. Whatever the conditions, we develop a source extraction solution that is right for you and your business.

The cleaner the working environment, the better the end result.

We call it Healthy Business.

For Your Industry.

Healthy Business

The Complete Extraction System by Dustcontrol.

# Extraction System by Dustcontrol

## 1 Vacuum Producers

The vacuum producer is the heart of the system. Here the vacuum is created that drives the system.

## 2 Filter Units

An extraction system should always be equipped with a filter unit.

## 3 Pre-Separators

Pre-separators can be used in all applications where the extracted material is coarse or voluminous.

## 4 Tubing System

The tubing system transports the material from the point of collection to the central unit.

## 5 Work Place Equipment

An extraction system is sized for only those outlets which are to be used simultaneously.

## 6 Accessories

A hose must have many qualities, the foremost for the operator however is flexibility.

## 7 Control Systems

Motor starters and system control panels control the operation of the system, operation of the vacuum producers and cleaning of the filter.
