Dustcontrol – Technology for Healthy Business

Removing dust from the workplace is not just a working environment and health issue, it is also a business issue. The cleaner the working environment, the better the end result. We call it **Healthy Business**.

What we offer

Dustcontrol manufactures mobile dust extractors for industrial and construction use, fixed extraction systems, peripheral equipment and accessories. We help companies all over the world to achieve a cleaner working environment. Our development department and production facilities are located in Sweden.

Using one of our solutions, you can extract dust, fumes, chips, oil spillages and other harmful substances, right at their source. The result is efficient production. A healthy working environment results in less absence due to illness, more efficient production, less downtime and better production quality.

You will find us in many different types of industries where a clean working environment is necessary. Dustcontrol supplies a complete range of products and accessories for small and large companies alike. For example, we supply advanced cleanroom solutions for the pharmaceutical and electronics industries, mobile dust extractors of various sizes for construction and rental companies and central extraction systems for the automotive and newspaper printing industries.

All of our systems are unique and tailored to each individual company's specific requirements.

Customer Focus

Dustcontrol was founded in 1972, with the idea of manufacturing extraction systems to capture dust and other pollutants at the source. We work closely with our customers, which means that we are always up to date regarding the requirements, regulations and working conditions in different types of workplace. We supply products that meet these ever-changing needs.

But it is not only products that we provide. We also provide the answers to questions such as: How can you capture and extract different kinds of particles and pollutants in the best possible way for your business? How do you deal with waste that can be recycled or reused?

The filter systems in all Dustcontrol mobile dust extractors are built to comply with the the stringent IEC machine classification H.

All our mobile machines are equipped with a fine filter and a HEPA filter (H13) that clean the exhaust air to 99.95 %. These high-efficiency filters also have a long service life, which not only results in cleaner air, but also low filter costs.

With Dustcontrol as your business partner, you will get the answers to these and any other questions that you may have. Whatever the conditions, we develop a source extraction solution that is right for you and your business.

Service & Expertise

Our sales organisation comprises experienced technicians with specialist skills in their areas of expertise. If you need a mobile solution, we will come to your site and show you how it works. In the case of stationary installations, we can design and dimension the entire system to fully match your needs. We can take care of installation, commissioning and documentation, as well as planning a maintenance and service schedule.

We offer a complete service package, including accessories and spare parts. We manufacture and customise portable dust extractors and source extraction systems with very high levels of filtration, in which we use our proprietary filters that have set the industry standard.

As well as being responsible for delivery and installation, our project managers also train the personnel who will be working with our products and systems. In most countries, we have our own team of qualified installers with in-depth knowledge of our products.

With the help of Dustcontrol, you will achieve both a cleaner working environment and a healthy business.

Dustcontrol AB

170 employees.

Founded in 1972.

Head office and factory
in Norsborg, Sweden.

The company is family-owned.

Turnover approx. 28 million Euro.

Subsidiaries in the United Kingdom,
Germany, Austria, USA and Finland.

Distributors in Europe, Asia, Australia
and North & South America.

Our Symbols

1-phase

The dust extractor has a 1-phase power system.
Single motor and Twin motor

3-phase

The dust extractor has a 3-phase power system.

The filter systems in all mobile Dustcontrol dust extractors are built to comply with the EN 60335-2-69, Annex AA, H-class.

The product is also available in ESD version.

Warning label – Asbestos. This device is H-classified and third party certified by a notified body according to EN 60335-2-69, Annex AA and TRGS 519.

Test Certificate – DGUV Test

We are certified according to ISO14001, ISO 9001 and ISO 45001.

This device is H-classified and third party certified by a notified body according to EN 60335-2-69 Annex AA.

Choose the Right Machine

1-phase Single motor Dust extractor

DC 1800. The DC 1800 and DC 1800XL are high-quality, compact versions of our best-selling DC 2900. It combines ease of use with a large suction capacity and high level of filtration.

DC 2900. A small, lightweight dust extractor that can handle tough conditions. Equipped with a cyclone inlet, reverse pulse filter cleaning and separate HEPA filter.

Task or tool

Drilling	Small crosscut and mitre saw, jackhammer
Cleaning Ø38 mm/1.5"	Personal decontamination
Reciprocating saw	Depressed centre disc Ø125 mm/5"
Jig saw	Wall sander Ø125 mm/5"
Abrasive disc Ø125 mm/5"	Oscillating machine
Fibre disc Ø125 mm/5"	

1-phase Twin motor Dust extractor

DC Tromb 400, is a compact, powerful, robust and efficient 1-phase dustextractor. There are three versions within the Tromb family: DC Tromb H 400 dust extractor, DCF Tromb pre-separator and a DC Tromb H 400 Twin dust extractor and pre-separator in one.

DC Tromb 600 is our latest powerful single-phase dust extractor. Launched for the North American market only.

Task or tool

Abrasive disc Ø230 mm/9"	Depressed centr. disc Ø230 mm/9"
Grooving saw 2xØ150 mm/6"	Concrete milling machine
Jackhammer, Circular saw	Chipping hammer
Concrete floor grinding max 500 mm/19"	Cleaning Ø50 mm/2"
	Filler sanding
Max 800 mm/32"	

3-phase Dust extractor

DC Storm 500, 600 and 700

DC Storm is compact, simple to transport and powerful. All these models feature a direct-driven, three-phase turbo pump suitable for continuous operation, heavy material transport, source extraction and cleaning. Equipped with frequency converters are suitable for use when only 16A access is available.

DC Tromb Turbo (Direct start or VFD), are equipped with a powerful three-phase turbo motor which is suitable for heavy cleaning (38 mm/1.5" accessories).

Task or tool

Concrete floor grinding 850 mm/33,5"	Semi-mobile system
Abrasive disc Ø300 mm/12"	Material transport
Suction lance Ø76 mm/3"	Brick saw Ø400 mm/16"
Concrete milling machine	Cleaning Ø50 mm/2"
Depressed centre disc Ø300 mm/12"	

Wet-vac

DC 50W and DC 75W. Sucks up water and slurry in all situations, for example when making holes with a diamond saw. The slurry can be collected in a filter bag. The unit is equipped with a submersible pump for continuous evacuation of the water.

Task or tool

Drilling
Demolition
Water damage

DC 50W

DC 75W

Air cleaner

DC AirCube 500, 1200 and 2000

Air cleaners are used as a complement to source extraction in very dusty environments. Recommended air change is 10 times per hour minimum.

Task or tool

Jackhammering, wall sanding, concrete grinding, demolition work, kitchen and bathroom renovation, and other construction work

Pre-separators

When large quantities of dust are produced, we recommend a pre-separator:

DCF 2800

DCF 60

DC 1800

DC 1800 XL

DC 2900L

DCF Tromb

DC Tromb H 400a

DC Tromb H Twin 400cL

DC Tromb H 600L

DCF Storm

DCF Wheelbarrow

DC Tromb Turbo

DC Storm 600L

Dust Classification H

The filter systems in all Dustcontrol dust extractors are built to comply with the stringent IEC machine classification H.

DC AirCube 500

DC AirCube 1200

DC AirCube 2000

1-Phase Dust Extractors

What do the letters mean against our products?

These letters describe which collection container comes with our machines. For our twin-models we use a combination, CL, AA and CA.

We also use abbreviations for the various performance, usage and material of the machines. We hope this will make your selection easier and quicker.

Collection Containers:

- c Bag
- a Container
- L Longopac bag

Performance, Usage and Material:

- H This device is H-classified and third party certified by a notified body according to EN 60335-2-69 Annex AA.
- P Turbo pump in Parallel drive
- S Turbo pump in Serial drive
- TR Compressed air driven
- EX ATEX
- SS Stainless Steel container/cyclone
- I Industry-line
- LPG Liquid Propane Gas powered
- Turbo Turbo-3-phase motor
- DCF Pre-Separator

Single-Phase Dust Extractors

DC 1800^H

This machine is particularly suitable for general cleaning and source extraction from handheld power tools (with suction casings up to Ø125 mm/5") and small table saws.

The DC 1800 H is equipped with a container. A plastic bag can be used inside the container to facilitate the emptying of dust and other material.

Part No DC 1800 H

Power 115/230V [W]	1340/1285
Sound level [dB(A)]	68

DC 1800^{XL}

The DC 1800 XL is especially suited for parquet grinding and other working operations that produce light dust. Suitable for general cleaning and source extraction from handheld power tools (with up to 5" suction casings) and small table saws. It is slim, lightweight and ideal for those that need a highly portable machine that is powerful enough for source extraction. Equipped with a steel container.

Part No DC 1800 XL

101880	230V /50Hz, EU
101881	230V /50Hz, Auto start*, EU

Negative pressure, max, US/CAN [inwg]	84
Power 115/230V [W]	1340/1285
Sound level [dB(A)]	68

*) DC 1800 Auto start. Plug the handheld power tool into the power socket on the unit. Set the selector switch to the AUTO position. The dust extractor will start automatically when the power tool is started. Power connected tool – min 200 W.

Single-Phase Dust Extractors

With plastic bag

DC 2900

The DC 2900c is our most popular dust extractor. It is suitable for vacuum cleaning and source extraction from handheld power tools (with suction casings up to Ø125 mm/5") and small table saws. The DC 2900c has a sturdy steel chassis with large wheels, but is still light and portable.

Part No DC 2900c

120000	230V /50Hz, EU
120003	230V /50Hz, UK
120008	230V /50Hz, CH

Single-Phase Dust Extractors

DC 1800 H Asbestos

The DC 1800 H Asbestos complies with the most stringent requirements and is IFA* certified. Asbestos is a known cancer causing material that should be removed with caution. This dust extractor is equipped with an antistatic hose, a plug for the cyclone inlet, plastic bags and other safety features.

Don't take risks with your health when removing asbestos!

Supplied with (Part No)

Suction hose antistatic (Ø38 mm /1.5"), 5 m /16 ft (2012)
Coupling socket (2108)
Floor nozzle B370 mm /W17" (7235)

1-Phase Dust Extractors

Single-Phase Dust Extractors

DC Tromb H 400

Dustcontrol has taken the DC Tromb H 400 to a new level. There are now three new versions within the Tromb family: DC Tromb H 400 dust extractor, DCF Tromb pre-separator and a DC Tromb Twin dust extractor and pre-separator in one.

As always, we are focusing to meet modern safety requirements along with an ergonomic and modular function. One of the major updates is that the new DC Tromb Twin model is separable. The dust extractor and pre-separator are easily detached and re-assembled from each other making transport simple.

Other important updates include a simpler filter change system and a motor package that is easier to remove. As well as that, improved motors and a sturdier chassis mean that the whole range has gone through a major expansion and upgrade.

Part No DC Tromb H 400

1-phase

Protected shutter valve

Locking ring for pre-filter

Microfilter/ HEPA H13 filter

The DC Tromb 600 is our most powerful single-phase dust extractor. It is designed to meet modern safety requirements and to work in conjunction with tools that have become ever more efficient and therefore produce more dust than they have previously. The maximum airflow is as high as 600 m³/h = 353 cfm, which is more than enough capacity for equipment such as large floor grinders and large electric cut-off saws.

Not only is the DC Tromb 600 compact, powerful and efficient, but it's versatile too. It is easy to transport around construction sites, move in stair-wells and lift into tight spaces. The wheels are puncture-proof and won't leave marks on the floor. The front wheels are lockable for working on uneven ground. The DC Tromb 600 is adapted for all types of fine dust such as concrete (silica), plaster, wood and filler dust.

The machine comes equipped as standard with a fine filter (rinsable polyester) and an HEPA H13 filter that complies with OSHA regulations. A filter monitor shows the user when it's time to clean the filter. Filter cleaning can be done automatically during operation, or once the work has been completed.

Single-Phase Dust Extractors

DC Tromb 400 H Asbestos

Supplied with (Part No)

- Connecting sleeve (2129)
- Coupling socket (2008)

DC Tromb 400 H Asbestos A

DC Tromb 400 H Asbestos C

The DC Tromb 400 H Asbestos is our most powerful 1-phase dust extractor up to now. It is designed to cope with both the demands for a clean and healthy working environment and handheld power tools which are more effective than ever. The dust extractor also enables the user to work without unnecessary interruptions – it tackles up to 400 m³/h. The dust extractor has been DGUV tested and approved by IFA (Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung).

The DC Tromb is not just powerful, robust and effective but also versatile and all-round. It can handle all kinds of fine dusts and materials created on a construction site created from cutting concrete, sanding, grinding or drilling floors or walls as well as dust from many other industrial factory processes. The machine can be connected to floor grinders and handheld tools like cutting machines, chisel hammers and saws. Due to its compact design the DC Tromb is also easy to move and transport.

As a standard the machine is equipped with a patented self-cleaning filter (washable polyester) and a H13-filter built to be Application Class H. A signal lamp shows when it's time to clean the filter.*

Accessory

44076 Merged outlet

The DC Tromb 400 H Asbest can be equipped with a new sound absorber, which has one outlet Ø76 mm instead of two. The sound absorber is made of stainless steel. The new outlet will make it easy for the customer to evacuate odour and to minimize air flow in the room.

* Switch operated reverse pulse filter cleaning

Single-Phase Dust Extractors

DC Chip Extractor

The new DC Chip Extractor replaces the previous model DC 3800 Wood Shavings Extractor and is no longer available.

This new machine is based on the DC Tromb chassis and DC Tromb engine package. It is equipped with multiway socket, 3-phase, has updated tighter container and a higher air flow and also larger filter area.

This machine is suitable for general cleaning and source extraction on most saws where continuous operation and a high separation rate are required. It is robust, mobile device that is easy to move. Can be used either as a standard 230 V machine or, as a part of a system with 3-phase cord, with auto start connected to a saw machine.

Capture dust with source extraction.

All dust on construction sites is a health hazard in the long term. However, there are some types of dust that are hazardous in the short term too. It has become standard practice for modern construction companies to take the health of their employees seriously and to minimise the levels of dust in the workplace.

Source extraction means that the dust is captured before it spreads and before it can be breathed in. Dust levels can be significantly reduced by fitting all power tools with suction casings and connecting these to efficient dust extractors.

Cleaning should be carried out with a dust extractor with the classification H. The dust extractor should be equipped with a HEPA filter to prevent the spread of the finest dust particles. Sweeping simply stirs the hazardous dust up into the air, subjecting those in the area to further exposure. To put it simply, source extraction and cleaning using approved dust extractors are absolutely vital.

3-Phase Dust Extractors

Quality, Containment & Performance – All in one.

TROMB

DC Tromb Turbo

DC Tromb Turbo Twin

The DC Tromb Turbo Twin is the successor to the DC 3900 Turbo Twin and, like this, a very powerful dust extractor. It is particularly suitable for concrete grinding since 80–90% of the coarse materials are separated in the pre-separator. The remaining dust goes into the filter cyclone.

3-phase

Three-Phase Dust Extractors

With **direct start**

DC Tromb Turbo

The DC Tromb Turbo is a medium sized dust extractor that expands the Tromb family. It is equipped with a powerful three-phase turbo motor which is suitable for heavy cleaning (38 mm/1.5" accessories) and is delivered with 7 m hose. Suitable for source extraction from medium sized power tools such as grinders, jack hammers and saws. Thanks to the tall cyclone, large filters and powerful motor package, it can handle large amounts of debris.

Part No DC Tromb Turbo a/c/L

With **frequency inverter (VFD)**

DC Tromb Turbo

DC Tromb Turbo is also available with a frequency inverter (VFD) and we would like to introduce the Longopac version. This model gives approx. 50% more filter area on the HEPA filter than its predecessor (5% more filter area for the fine filter). New safety features such as overheating protection is added. With the semi automatic filter cleaning and quick coupling for filter change, this machine gets the job done.

Part No DC Tromb Turbo VFD a/c/L

Three-Phase Dust Extractors

DC Storm

Powerful, reliable and safe mobile dust extraction

The DC Storm is a powerful and reliable mobile dust extractor. They are built on a robust and sturdy steel chassis for maximum durability, for example on construction sites. With a direct-driven, three-phase turbopump, the DC Storm is suitable for continuous operation, conveying heavy material away, source extraction and cleaning.

The DC Storm provides sufficient air flow for several users at the same time and it can also be used as a semi-mobile central unit in a tubing system. It is suitable for source extraction for grinding discs up to approx. 800 mm/ 31" in diameter.

Three basic models are available: bag (c), container (a) and Longopac (L), each powered by a 4 kW, 7.5 kW or a 10 hp motor.

The DC Storm 700 is also equipped with a frequency converter, very useful when only 16A are available. This machine is equipped with a PTFE filter extracting large quantities of concrete dust and is suitable for example floor grinding.

Info of all our models – DC Storm 500, DC Storm 600 and DC Storm 700 is presented on the following pages.

HEPA H13 filter (42807)

DC Storm 700

The DC Storm 700 is also equipped with a frequency converter, very useful when only 16A are available. This machine is equipped with a PTFE filter extracting large quantities of concrete dust and is suitable, for example, floor grinding.

Three-Phase Dust Extractors

DC 5900 9.2kW S

This machine is primarily intended to be used for pneumatic conveying or the removal of very heavy material in conjunction with a pre-separator. The extra-large suction capacity can also be utilised for regular source extraction and cleaning, in situations where extra long hoses up to 50 m are required. To prevent overheating during intensive use, the pump has been equipped with a cold air intake.

The reverse pulse filter cleaning system provides extra-long filter life and ensures no loss of suction.

DC 5900 9.2kW P

DC 5900 9.2kW P, is a powerful machine with sufficient capacity to support up to three users simultaneously with tasks such as cleaning with Ø38mm cleaning equipment and two more operators with hand-held grinders, saws, drills or with two users with Ø50mm cleaning equipment.

The machine is especially suitable for placed in the basement and with a standing Ø76mm pipe or hose system installed as a riser in stairwells. At each floor, you can then effectively connect the machine's hose through a manifold with flap valve.

- c-model, Intelligab, 10 x roll (43619)
- L-model, Longopac Mini Superstrong 4 x 23 m (432177)

We are expanding our Asbestos-line of dust extractors with 3 new machines: Tromb H Asbest Turbo VFD. This solution is especially developed for asbestos dust extraction that demands long operation times in large construction sites. The DC Tromb Turbo Asbestos is certified by the IFA* for asbestos removal. If you require extra long hose length for your asbestos operations, Tromb H Asbest Turbo VFD is the best choice. This powerful machine can be ordered with different selection of collection containers:

- a) Steel container
- c) Plastic bag - Intelligab
- L) Logongopac

Semi-Mobile Systems

A semi-mobile system increases the accessibility to a powerful dust extractor on each floor. Instead of moving several small and large dust extractors around, multiple users can simultaneously connect their machines or power tools via a hose to a connection point.

Semi-Mobile Systems

Semi-mobile dust collection systems are a practical solution when work is to be carried out on several floors and by several users at the same time. Each floor is connected to a central extraction system via a hose connection package and is equipped with a connection point for connecting the suction hose to the machine being used.

A Ø76 mm 1/3" hose that forms the main line is taken up through, for example, a lift shaft, refuse disposal chute or stairwell, and run to the dust extractor, which can in turn be connected to a pre-separator to collect larger particles, if necessary. One package is used for each floor to facilitate installation. The sound level is reduced and it becomes easy for each team to clean up regularly, once the task has been completed.

The Branch Pipe and Hose Connection Package (Prod No 3353) consists of

- 1 x Rubber plug with chain (4016)
- 1 x Hose, 2.5 m, 76 l (2024)
- 2 x Joint Ø76 mm 1/3" (remove rubber ring) (3007)
- 2 x Tube Ø76 mm 1/3" * 135 (3341)
- 1 x Screw 6*40 (MC6S)
- 1 x Branch pipe 45°, Ø76 mm 1/3" (300311)
- 1 x Flap valve Ø50/76 mm 1/2"1/3" (3006)

The Start Box (Prod No 8178)

The Hose Connection Package does not include electrical cables or the Start Box for vacuum producers (ordered separately).

The Start Box (8178)

Simultaneously Dust Extraction.

Several users can simultaneously connect their machines or power tools via the hose connection point.

One **Hose Connection Package** is used for each floor.

The **Start Box** is placed at the base level.

Wet-Vacs

for those of you who deal with larger quantities of water, we have developed a line of professional wet-vacs that can handle the toughest environments.

Wet-Vacs

DC 50W

Supplied with (Part No)

Coupling socket (2108)
 Connecting sleeve (2114)
 Suction hose Ø38 mm /1.5", 5 m /16ft, antistatic (2012)
 Floor nozzle B370mm /W14"(7236)
 Suction pipe Ø38, aluminium (7258)
 Filter bag (42190)

Part No DC 50 W

118600 230V /50Hz, EU

1-phase

When drilling in concrete, large quantities of water are required, which becomes very dirty. Using a wet-vac to effectively extract the water prevents both the workplace from becoming wet and dirty, and the sewerage system from silting up. The slurry solids are collected in a filter bag for easy handling and disposal.

Dustcontrol's wet-vacs are easy to disassemble for cleaning and decontamination. This is an important benefit on units that require frequent cleaning. Robust construction helps these units resist the knocks from everyday use.

Updates of DC Wet-Vac 75 W

Our DC 50W and DC 75W liquids extractors have been updated with a smaller electrical connector between the motor top and the pump. And a drain valve to easily drain water.

Note! When purchasing spare parts for the engine top for previous models (with a blue and larger electric connector), order part no 432138. The new motor top (with black and small electric connector) has part no 432138-1.

Air Cleaners

Air Cleaner

DC AirCube 500

DC AirCube 500 has been developed for ease of use and durability. The fan unit is a radial blower which is especially designed to build up high pressure across its entire flow range. This means that the unit generates a large amount of air flow during the entire lifetime of the filter. An exhaust hose can be used to create negative pressure in a sealed room. The fan has two speed settings, which means that the unit can be run economically, for example during the night.

Air Cleaner

DC AirCube 1200

The DC AirCube 1200 is a highly efficient and robust air cleaner with the ability to clean the air even in large rooms, at a rate of up to 1060 m³/h /624 cfm. The encapsulated fan housing contains a radial blower type fan that builds up high pressure across its entire flow range, which provides effective air cleaning for the entire lifetime of the filter. The speed of the fan is also continuously variable in order to save energy. The DC AirCube 1200 is equipped with both a HEPA H13 filter that captures the smallest particles and a light that indicates when it is time to replace the filter.

DC AirCube 2000

With a capacity of approximately 1.850 m³/h /1089 cfm the DC AirCube 2000 is the Dustcontrol's most powerful cleaner. The DC AirCube 2000 has a robust, stainless-steel chassis and an encapsulated fan with variable speed setting. With its ergonomic design, it is easy to carry and transport. It can also be operated when positioned horizontally.

The DC AirCube 2000 has a HEPA H13 filter with an area totalling 10 m² /107 ft². An integrated light indicates when it is time to replace the filter.

Dustcontrol

Part no 4613
Dustcontrol Part n

A photograph of a decontamination system, likely a glovebox or hot cell. The image shows a dark, heavy-duty metal structure with a viewing window on the left side. Inside the chamber, a white perforated tray is visible. A prominent feature is a thick, black, coiled cable that hangs vertically from the top of the chamber. The interior is brightly lit, creating a strong contrast with the dark exterior. The overall scene suggests a controlled, hazardous environment where safety and containment are paramount.

Decontamination Systems

Compact Vacuum Systems

DC Box

The DC Box is a especially designed dust extraction cabinet that protects against hazardous dust during decontamination and cleaning before servicing or repairing machines and tools. The DC Box is equipped with a blow gun and a suction hose for vacuum cleaning. Larger particles and debris fall down into the collection container a plastic bag attached to the bottom of the cabinet.

The DC Box is easy to work with. Tools and machines are placed onto the rotating worktable and slid in through the side door. These are then cleaned either by vacuuming or using compressed air. The fine dust is vacuumed up and transported away via a tubing system to a complete central unit located either in- or outdoors.

DC Box

DCF Tromb

DC 11-Module

Installation example for our DC Box.

Standard or Custom?

The DC Box is available in two versions: Standard and Custom:

DC Box Standard is the ideal solution for most users. This solution has now been updated with a selection of 3 discharge options: Container (A), Intelli-bag (C) or Longopac (L) as standard.

Some more new features of DC Box Standard:

- The outlet on the top of the DC-Box has been enlarged to D108 instead of the previous D76.
- The user can adjust the working height as the legs are now adjustable.
- The outer dimensions of the box have also been adjusted to fit on a standard European pallet. Safer and more cost-effective transportations!

DC Box Custom. If you want to be able to roll taller equipment directly into the cabinet for decontamination, then the DC Box Custom is the solution for you. DC Box Custom is customised after your requirements.

The size of the central unit and dimensioning of the tubing system is tailored to the needs of the projects. The system can be expanded so that it can also be used as a central extraction system with connections that are easily accessible across the entire worksite.

Part no 7482 DC BOX STANDARD L

UPDATES

The former solution DC Box Compact is discontinued. In the DC Box Compact solution a DC AirCube 500 was connected as standard. However if ventilation of the DC Box with an air cleaner is desired, it can be connected to the D108 outlet of

our new solution DC Box Standard. Shutter valves and tubing systems that previously came as standard for DC Box Standard will now have to be selected separately instead.

Pre-Separators

About Pre-Separators

Pre-Separators can be used in all applications where the extracted material is coarse or voluminous. These can be placed in the actual workplace for separate handling or recovery of the extracted material, or centrally to relieve filter loading.

Pre-Separators separate material from the air flow using the action of a cyclone or with inertial separation.

The Cyclone Principle is very effective in separating particles down to 1/100 mm.

Inertial separators are generally configured as containers with the inlet and outlet in the same wall of the container. When the air flow changes direction abruptly, separation occurs for the particles with higher relative mass.

Cyclone Pre-Separators

TYPE OF MATERIAL	Air flow [m ³ /h]	Select Pre-Separator
All types, particularly where a large percentage is fine particulate	100–200	DCF 60, F 2500, DCF 2800
	100–500	DCF Mobil
	200–500	F 3500
	500–700	F 8000
	500–1000	F 11000
	1000–4000	F 20000
	2000–5000	F 30000

DISCHARGE TO	Volume	Equipment
Plastic bag	lesser	Discharge cone
Compacted in plastic bag	greater	Auger Compactor
Open Container, Conveyor	lesser	Foot Valves/Auto Foot Valve/ Discharge Valves
	greater	Peristaltic Airlock
Small Container	lesser	With or without plastic bag
Tipping Container	greater	

Inertial Pre-Separators

MATERIAL TYPE	Air flow [m ³ /h]	Volume	Select Pre-Separator
Coarse and dense	250-2000	moderate	Tipping Container
	250-2000	large	Large Container

Cyclone Principle

Meaning that the inlet is mounted tangentially on the body and the air flow is thus forced against the inside of the cyclone.

Inertial Principle

Meaning that the air stream flows into the container and abruptly changes course.

Mobile Pre-Separators

DCF Tromb

The DCF Tromb a/c/L is ideal for floor grinding and semi-mobile systems where large quantities of dust are handled. The pre-separator reduces the strain on the extraction source and is equipped with a intellibag/Longopac/container-solution for dust-free bag replacement, therefore allowing the user to avoid unnecessary and time-consuming shutdowns.

TECHNICAL DATA	DCF Tromb

Longopac (432177)

DCF Storm

The DCF Storm is ideal for floor grinding and semi-mobile systems and could be set apart to handle large and heavy quantities of dust. The pre-separator relieves the loading on the filter in the vacuum source and is equipped with a Longopac solution for dust-free bag changing, so that the user can minimise unnecessary and time-consuming stoppages. Also available as a standard “c” model with an intellibag.

TECHNICAL DATA	DCF Storm

7198	2.5 m³/660 gal

The most hazardous dust is the dust you can't see.

The smaller a particle is, the deeper into the pulmonary system it penetrates. Respirable dust, the dust we inhale, is made up of particles smaller than 5 thousands of a millimetre (5 μm). Because the particles are so small, they can penetrate into the deepest parts of the pulmonary system where the air moves too slowly to be able to breathe them out again.

The lungs' way of protecting themselves is to wrap the foreign particles in nodules of connective tissue, which, in time, leads to pneumoconiosis or COPD (Chronic Obstructive Pulmonary Disease). Some types of particles, such as silica and asbestos dust, cannot be broken down by the body and are also sharp, which is why they continue to cause damage long after they have become lodged in the lungs.

The best protection is to remove dust at the source and never allow it to reach the air. Dustcontrol has developed suction casings for most handheld and stationary machines, and also produces tailor-made suction casings.

Classification of Dust Extractors and HEPA Filters

Dust extractors are used to improve the working environment, and to reduce levels of hazardous dust in the air to a minimum. This places great demands on the ability of the dust extractor to separate fine dust. We use a fine filter in our mobile dust extractors, which separates most of the dust. But in order to capture close to 100% of the finest and most dangerous particles, we always complete the design with a HEPA H13 filter.

Here at Dustcontrol, we use conical pleated filters in all of our dust extraction units. A pleated filter has a very large area in relation to its physical size. The dust extractors can therefore be compact in relation to the large filter area they contain.

Only original Dustcontrol filters are tested and approved for use in our machines. The use of other types of filters could lead to the leaking of hazardous dust and/or machine breakdown. Dustcontrol's warranty only applies to machines equipped with original Dustcontrol spare parts. The filters are certified in accordance with current European requirements for dust extraction. This ensures that, with correct handling, optimum filtration will be achieved. Follow the instructions when handling filters, so that they can be replaced without exposure to hazardous dust.

To ensure that the filters comply with the requirements of relevant regulations for health and safety at work, a number of different testing standards are used. These are described below:

Test methods

The test methods used in current standards for dust extractors and filters are always based on particle counting. By injecting particles before the filter and by using a particle counter to determine the concentration before and after the filter, the penetration can be calculated (a penetration of 0.1% is equal to a degree of separation of 99.9%). The test is carried out in several

stages by individually examining the filter media, the complete filter cartridge and, in some cases, also the complete unit.

HEPA filters — High Efficiency Particulate Air Filters

When classifying HEPA filters, Dustcontrol uses the strict HEPA standard (EN 1822-1). It is divided into different levels (E10 to H14) depending on filtration efficiency. Dustcontrol applies level H13, which can separate up to 99.95% of the particles between 0.15 and 0.30 µm in size. This particle size is used because it is the hardest to separate – both larger and smaller particles are easier to capture in a filter.

Dust extractors

In IEC-60335-2-69 (EN-60335-2-69), the standard for testing wet and dry extractors, dust extractors are classified into three categories – **L for low, M for medium and H for high** – where the H category is the most stringent. (Please note: do not confuse this “H” with that in HEPA H13). The category required for a specific application is decided on the basis of the permitted maximum concentration for that type of dust (MAK) in the working environment or by local regulations.

The test according to EN-60335-2-69 comprises two parts:

1. A test of the filter system – in our case, a fine filter and a HEPA H13 filter. To achieve category H, a degree of separation of 99.995% is required, where 90% of the test particles must be smaller than 1.0 µm. Our fine filters comply with category M, and our HEPA H13 filters with category H.

2. A test of the “assembled unit” – in our case, a complete dust extractor. Here, 99.995% efficiency is also required, however 10% of the particles must be smaller than 1.0 µm, 22% smaller than 2.0 µm, and 75% smaller than 5.0 µm.

The filter systems in all Dustcontrol dust extractors are built to comply with the stringent IEC machine classification H.

Dustcontrol's high-efficiency air cleaner – the DC AirCube – is equipped with a HEPA H13 filter to separate dust and particles down to 0.3 microns. The DC AirCube contributes to a healthier working environment.

Dust class H (degree of permeability $\leq 0.005\%$) for particles as small as 0.1 mg/m³ and carcinogenic particles. According to IEC/EU 60335-2-69

Classification of our Dust Extractors

NAME	CLASSIFICATION	STANDARD	EFFICIENCY	PARTICLE SIZE	EXAMPLE	MAK (Maximum Workplace Concentration)
	L=		> 99%			> 1.0 mg/m ³
	M=		> 99,9%			> 0.1 mg/m ³
IEC* standard	H=	IEC 60335-2-69	> 99.995%	0.1 - 5.0 µm**	H=99.995%	< 0.1 mg/m ³ and carcinogenic substances including asbestos

* IEC: International Electrotechnical Commission

** Part 1: 90 % < 1.0 µm

Part 2: 10 % < 1.0 µm
22 % < 2.0 µm
75 % < 5.0 µm

Classification of our HEPA Filters

NAME	CLASSIFICATION	STANDARD	EFFICIENCY	PARTICLE SIZE	EXAMPLE
	E10		85%	MPPS** between 0.15–0.30 µm	
	E11		95%		
	E12		99.5%		
HEPA*	H13	EN 1822-1	99.95%		HEPA H13 = 99.95 %

* High Efficiency Particle Air filter, ** Most Penetrating Particle Size

Accessories and Hoses

In order for you to get the most out of your Dustcontrol, you need the right accessories. We supply cleaning equipment in all sorts of designs and materials. If something is missing, we can even manufacture customised solutions. Please speak to your sales representative for more information.

About Suction Hoses

Hoses need to have different characteristics depending on their intended use. Dustcontrol supplies hoses that are:

- wear-resistant, lightweight and flexible
- unaffected by extremes of temperature
- crushproof
- antistatic

When using long suction hoses that are coupled together, the hose closest to the suction casing should be the one with the smallest diameter and it should be no longer than 9,8 ft / 3 m. Coupling should be carried out using external couplings that are easy to use.

Our selection of Suction Hoses

Resistance Scale

- 1 Excellent
- 2 Good
- 3 Limited
- 4 Poor

* To order an antistatic (ESD) version, add the letter E to the end of the Part No.

** The wire helix must be bared and left in contact with conductive material for static discharge.

Suction Hoses

Turnable Hose Connectors

Part No	Description
2114*	Connecting sleeve, turnable Ø1.5"/1.5" /38/38
2128*	Coupling sleeve, turnable Ø2"/1.5" /50/38
2129*	Coupling sleeve, turnable Ø2"/2" /50/50

Part No	Description
2131*	Intermediate sleeve, turnable Ø2"/1.5" /50/38
2132*	Connecting sleeve, turnable Ø1.2"/1.5" /32/38
2133*	Coupling sleeve, turnable Ø1.5"/1.2" /38/32
2171*	Coupling sleeve, turnable Ø1.2"/1.2" /32/32

*To order an antistatic (ESD) version, add E to the end of Part No.

Suction Hose Quick Coupler

Multi-Connection for Hand-held Power Tools with Integrated Suction Casings

The multi-connection fits onto suction casings with an outlet diameter of 0.98-1.37 inch /25-35 mm. Cut off a section at the required diameter (it is pre-marked with: 25, 27, 29, 31, 33, 35 mm) and slip the multi-connection over the tubing. Connection sleeves 2114 or 2115 then fit onto the other end to connect the hose.

Part No	Description
42497*	Multi-connection for hand-held power tools with integrated suction casings
2114*	Coupling socket Ø1.5/1.5" 38/38 mm, turnable
2115*	Coupling socket Ø1.5/1.5" 38/38 mm

Suction Hoses

Non-Turnable Hose Connectors

Part No	Description
2008*	Coupling sleeve Ø3"/2" /76/50
2100*	Intermediate sleeve Ø3"/2" /76/50
2101*	Intermediate sleeve Ø1.2"/0.98" /32/25
2106*	Connecting sleeve Ø0.67"/1.2" /17/32
2107*	Coupling sleeve Ø2"/2" /50/50
2108*	Coupling sleeve Ø2"/1.5" /50/38
2109*	Connecting sleeve Ø1"/1.5" /26/38

Part No	Description
2115	Connecting sleeve Ø1.2"/1.2" /32/32
2116	Connecting sleeve Ø1.2"/1.2" /32/32
2118	Connecting sleeve Ø1.2"/1.2" /32/32

DC Reach – High Level Cleaning System

With our innovative cleaning technology DC Reach, it has never been easier to remove dust and combustible materials from high altitudes and hard-to-reach places. Traditionally, cleaning at height has involved hydraulic lifting aids, work platforms and at least two people to carry out the job safely. Now the task can be solved safely by one person.

The system consists of a pipe system with straight pipe parts and bends that are connected as desired. Along with this, there are several suction nozzles to meet the customer's unique needs.

In addition to the standard version of DC Reach, there is also DC Reach ATEX for customers who need equipment suitable for an ATEX environment. All these components are certified and meet the ATEX-directive 2014/34/EU: ISO 80079-36:2016, ISO 80079-37 and are NFPA certified.

Part No DC Reach System

7600	DC Reach Standard
7620	DC Reach ATEX

Standard Set

7601	Pipe, Carbon fiber, L - 1.25m x $\varnothing 38\text{mm}$

Choose the Right Filter

Pleated design increases the filtering surface. For filtering to be effective without affecting user performance, the air velocity through the filter must be maintained but without overloading the volume capacity of the filter media. Suitable filter loadings vary with the material being extracted. Suitable filter loading, measured in m^3/hr per m^2 of filter area, for concrete dust is for example, a maximum of $120\text{m}^3/\text{hr}$ per m^2 , while welding fume is only $60\text{m}^3/\text{hr}$ per m^2 as it exerts a higher filter loading or simply put, it will block the filters more quickly. This is always considered in Dustcontrol's design criteria.

Our dust extractor separates dust in three stages:

1. Large particles are separated dynamically in the **Cyclone**.
2. Filtration then takes place in the pleated **Fine Filter**.
3. Followed by a pleated **Microfilter** HEPA H13.

The Fine Filter. This filter is designed to capture the small particles that are not captured in the pre-separator or cyclone.

Cellulose Fine Filter

A high-quality, standard filter with high filtration efficiency. Epoxy-treated for improved resistance to humidity and other elements. It is pleated around a support cylinder.

Polyester Fine Filter

A high-quality filter resistant to most substances. Perfect for use in wet environments such as mechanical workshops in which cutting fluids etc. is used. Slightly smoother surface than the cellulose filter, enabling more efficient cleaning and a longer service life. The filter is washable.

PTFE Fine Filter

The polyester filter is treated with PTFE, meaning that the filter coating can easily be separated from the surface. This type of filter is suitable for use in applications such as floor grinding. The filter is washable.

A Pre-Filter is a basic filter used with air

cleaners in order to capture large particles and relieve the loading on the HEPA filter. The pre-filter is designed as a pleated filter in cassette or textile form. It is disposable. Each Pre-Filter filter is individually tested for level G4 compliance.

Conical pleated filter with sealing flange and protective jacket. The separate HEPA filter is fitted inside the fine filter.

Air cleaner

Our Air cleaners separate dust in two stages:

4. Large particles are separated by the **Carpet Pre-filter**, or a
5. **Pre-filter cartridge**,
6. followed by a pleated **HEPA H13 Microfilter**

Microfilter, HEPA filter, Absolute Filter goes by many names, and has a filtration efficiency of 99.995%.

A HEPA Filter

The HEPA filter is assembled from a very fine-meshed fibreglass textile with extremely deep-acting properties. One or two layers of e.g. cellulose may be added to improve rigidity.

Each HEPA filter is individually tested for level H13 compliance. The test report can be obtained on request.

Dustcontrol's HEPA filters comply with the requirements for H-class dust extractors. The HEPA filter should be replaced when it becomes saturated.

All Dustcontrol's dust extractors and air cleaners, have a separate HEPA H13 filter installed after the fine filter or pre-filter. The filter systems in all Dustcontrol dust extractors are built to comply with the the stringent IEC machine classification H.

Packaging

Dustcontrol Premium Packaging

Dustcontrol is now offering a more robust premium alternative of packaging to protect and secure the transport of larger mobile and semi-mobile units. Premium packaging is designed for fast, quiet and ergonomic mounting/disassembling with the aid of sheet metal clips and tape sealing.

Premium Packaging is an option when ordering and the prices are set according to the table above. Up on return an undamaged packaging to Dustcontrol AB, half of the packaging cost will be credited.

Part No Description

44637	Premium Packaging for DC 11-Module XL
44638	Premium Packaging for DC 5900 / DC Storm
44639	Premium Packaging for DC Storm
44640	Premium Packaging for DC 11-Module

Dustcontrol

Healthy Business – Healthy Team

Dustcontrol

INVISIBLE

THE HAZARDS ARE WHAT YOU CANNOT SEE

Our mission is to highlight the health concerns and consequences of not using the right equipment. We highlight the dangers – those tiny particles that penetrate deep into the lungs, causing lung cancer, asthma and chronic bronchitis, among other things. To be a leader in this industry you need a core issue. Ours is health – Technology for Healthy Business. We create products that solve the problems associated with unhealthy working environments and that eliminate the hazards the eye cannot see.

Visit dustcontrol.com to read more about how we can help you with what you cannot see.

Which solution will you choose?

As a true professional, you have high requirements for your equipment. Dustcontrol has been involved with dust extraction and material transport for more than 50 years and we supply dust extractors and air cleaners for all types of applications. No matter what you choose, you can be sure of getting truly professional equipment that is built with your work environment and health in mind.

Dustcontrol

Strategy and Certifications at Dustcontrol

Dustcontrol operates within the environmental sector. Our products are made to minimise the release of dust, fluids, and other hazardous particles into the environment. Our slogan, "Technology for Healthy Business", is an approach that characterises our entire operation.

We have enlisted the help of the EcoVadis platform to evaluate our sustainability work. Every year, their experts analyze documents that we share from our management system and based on that we get a ranking but also suggestions for future actions.

The four focus areas of Dustcontrols strategy are:

RESPONSIBLE SOURCING
REDUCED ENVIRONMENTAL IMPACT

SUSTAINABLE PRODUCT DEVELOPMENT
ATTRACTIVE WORKPLACE

THE GLOBAL GOALS

Dustcontrol is certified in accordance with ISO 9001, 14001 and 45001 with an integrated quality and environmental management system. This includes process management, identifying our environmental footprint, adhering to regulations, and training our employees in the topic. We carefully adhere to the EU's Reach and RoHS directives in order to minimise our use of chemicals. With the help of Lean production, we continuously evaluate our processes and look to improve our overall efficiency.

Dustcontrol QR Codes

Easily scanned using a smartphone, QR codes work like quick links, taking you straight to the information you need. We aim to make it easy for you to find information about our products, such as how to replace and clean the filter, or replace the bag. Our QR codes make it easy to find helpful instructional videos in the language of your choice, including English, Swedish, German or Finnish.

To scan the codes, you will need to download a QR code reader app. These can be obtained free of charge via the App Store, Android Market or similar platforms.

QR codes on our machines & accessories
